

ManikinPC

brings your manikins to life.

Simulate the human experience with a level of realism that rivals human subjects. Whether you're testing car seats or cabin climate, assessing the comfort and sensations of adults or babies, ManikinPC allows you to create realistic physiological responses—of skin, muscle, fat, and core—in real-time with any Thermetrics manikin.

ManikinPC software simulates the human thermoregulatory system and provides metrics for thermal comfort and thermal sensation.
